You can rely on PC Guide: Our team of experts uses a combination of independent consumer research, in-depth testing where necessary, and market analysis when recommending products. If you're trying to program an RCA Universal Remote for your devices, we've got you covered. In this guide, we've shown a step-by-step walkthrough of how to set it up with and without codes. For convenience, we've listed some common codes along with links to the code finder and user manual. RCA universal remotes are widely used and work well with TVs, DVDs, CableBoxes, and other devices from most brands, so you shouldn't encounter any compatibility issues. One of the benefits of using an RCA remote is that you can program it for multiple devices, which comes in handy if you lose the original remote. Our expert advice will help you sync your entertainment devices quickly. We've used the RCA 3-Device Palm-Sized Universal Remote for this guide, but the process of programming any RCA remote is similar. To program a remote with and without codes, follow these steps: power on the selected device, press and hold the device key (TV, DVD, or your selected device), enter the code while holding down the button, and if the power button lights up, the remote is programmed. You can find the code for your device in the user manual or refer to our list of common codes for popular TV brands. For a comprehensive list, you can also use RCA's remote code finder tool or view the official RCA user manual online. To program an RCA remote with a TV as an example, start by powering on the device you want to control. Next, hold down the corresponding device key on the remote until the power button lights up. Enter the code for your selected device while holding the button, and the power button's light will turn off after the first digit. Keep holding the button until the power button lights up again, indicating successful programming. If you enter a wrong code, the power button will blink and turn off, or the remote buttons won't respond correctly. In this case, repeat the process with a different code. Alternatively, try the auto-code search method to simplify the process. To use the auto-code search method, first power on the device you want to control. Then, press and hold the corresponding device key on the remote until the power button lights up. Next, simultaneously press and hold both the device button and the power button until the power button turns off and then back on again. Release both buttons. Point the RCA remote at your selected device, press the 'Play' button, and wait for five seconds. If the device turns off, you've found the correct code. If not, repeat the process by pressing 'Play' every five seconds until the device turns off. Once the device is turned off, press the 'Reverse' button and wait two seconds. If the device turns on, press the 'Stop' button to lock in the code. If your device doesn't turn on, keep pressing the 'Reverse' button every two seconds until it does. Finally, when your device turns on, press the 'Stop' button to complete the programming process. To set up the RCA universal remote for your TV, follow these steps: Turn on your TV and press the TV button on the RCA remote. Hold down the TV button while entering the code, and if the power button lights up, you're done. If not, check our guide for more details or try using the auto-search feature on your remote. To find the correct code, consult your instruction manual or visit the RCA Remote Code Finder website. You can also use the auto-search feature to scan different codes until it finds the right one. RCA universal remotes work with most brands of TVs and other devices, so you shouldn't have any compatibility issues. If you're looking for a simple solution that's easy to use, the RCA universal remote is a great choice. With proper setup, this type of remote can act as your TV's command center.
